### Specification notes

Cables cannot be routed along the top channel of the frame where the screen is attached.  
Satin chrome brackets included.  
Field assembly required.

# ADDENDUM - Storage units - Laminate

## Specifications and recommendations – Storage units

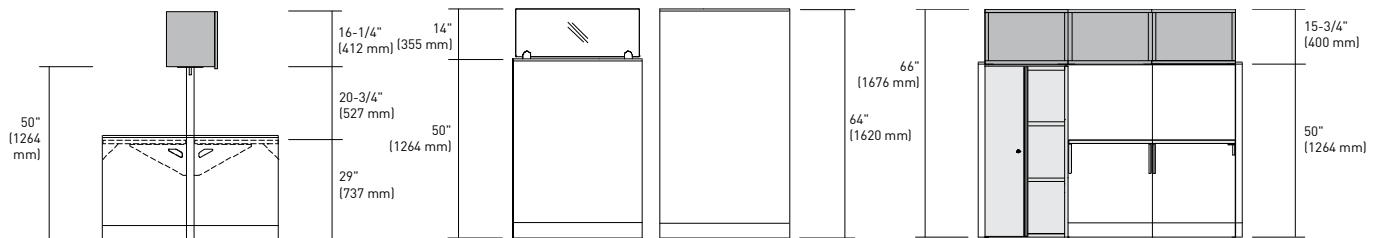

### Two-tone applications

- ▶ The first finish specified will be applied to the frame of the unit. The second finish will be applied to the unit's front.
- ▶ Two-tone application and wood grain direction:

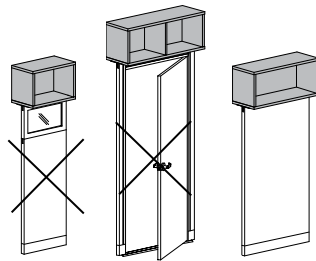

### Height management

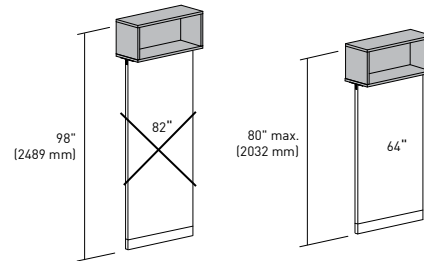

Configuration examples for 50" (1270 mm) high panel:

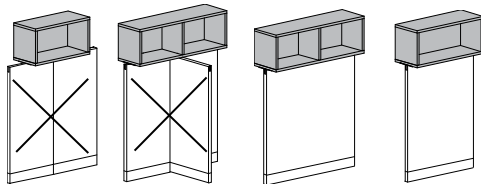

### Uses: Recommendations and best practices for center-mounted overhead units and panel privacy screens

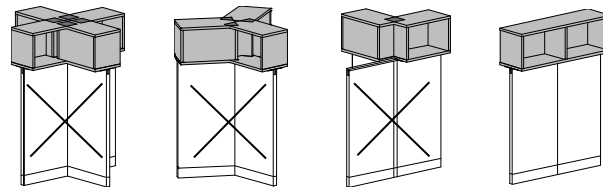

The overhead unit needs to be installed on an acoustical panel/stack.

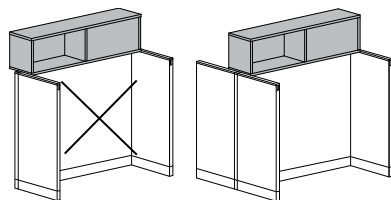

The maximal height for a combination overhead/panel is 80" (2032 mm).

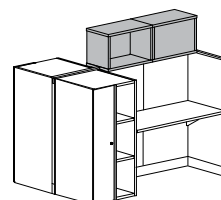

The overhead unit's width needs to be equal to the total width of the panels on which the overhead unit is installed.

Depending on the configuration, it is important to make sure that the overhead units do not conflict with each other.

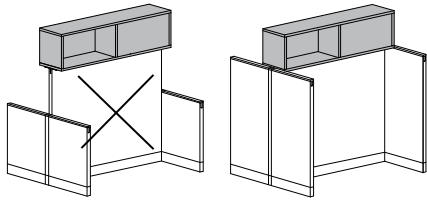

**Important:** The overhead units need to be supported by return panels on both sides.

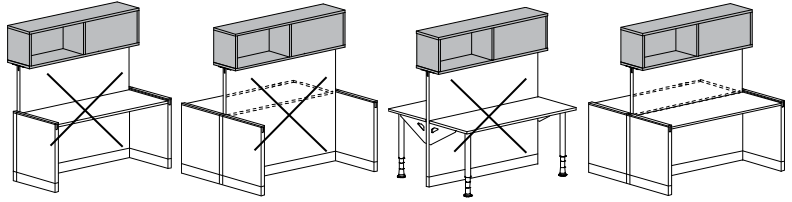

**Options:** The overhead units need to be supported by vertical storage units which are of equal height or higher than the panels on which the overhead units are installed.

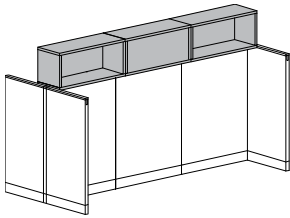

## Specifications and recommendations – Storage units

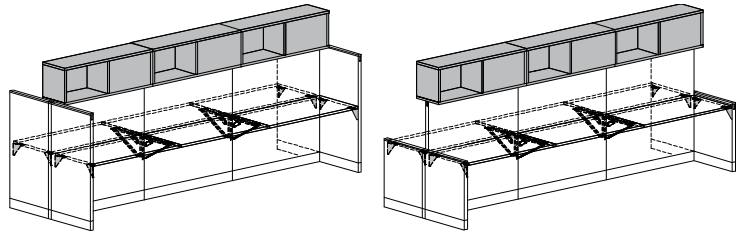

**Without work surface:** Return panels must be of equal height to the panels on which the overhead units are installed.

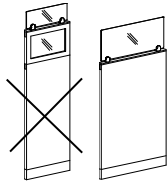

**With work surfaces:** It is possible to use return panels that are lower than the panels on which the overhead units are installed. To do so, there must be a work surface on both sides of the panel.

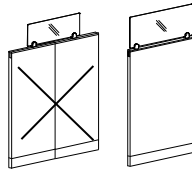

Generally, a panel run with overhead units is maximum 10' (3048 mm).

A panel run with overhead units can be up to 12' (3658 mm) if work surfaces are installed on both sides of the panel and all along the panel run. In this case, the ends must be fixed using panel brackets. Return panels can be 30" (762 mm) or wider.

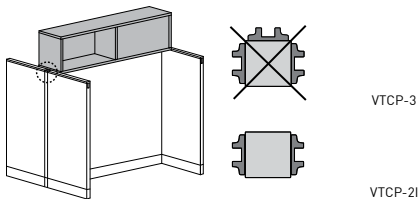

Panel privacy screens can only be installed on acoustical panels.

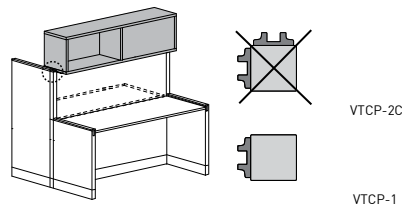

Panel privacy screens must have an equal width to the panel on which it is installed. The screen can only be installed on one panel at a time, which means that it cannot overlap two or more panels.

### Finishing touches for overhead configurations

The finishing touches are key components for the esthetics and configuration of the product. When specifying a laminate overhead, care must be taken in selecting these components.

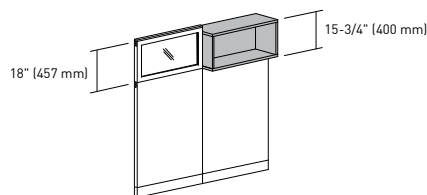

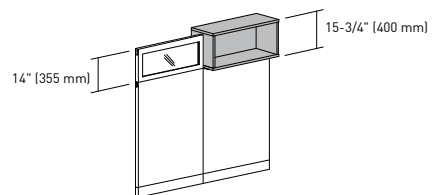

180 degrees panel junction configuration.

90 degrees panel junction configuration.

### Non-recommended configurations

All metal and laminate overhead units are 15-3/4" (400 mm), which results in a homogenous appearance. In order to create the desired effect, care must be taken when specifying the combination of products.
